About us

We're a Northumbrian compliance company with focus on computerised and automated systems validation; typically involved on large scale projects from the inception we are specialised in assisting our customers to define their IT landscape and select the best-in-class systems for their manufacturing operations.

As part of this we help with the development of all lifecycle activities and documentation from requirements, specification through testing, production release and maintenance (change and configuration management) from the construction phase in the field to the operational phase in the factory.

Our expertise in the integration and testing of industrial systems allows our customers and their teams to focus on their core business whilst we take care of the compliance and documentation challenges associated with building state-of-the-art facilities.

Services
